Please note: freight prices are currently volatile and outside of our control. Therefore prices are subject to review without notice.

Goldline and Powerline Standard additions

The following extras are available at additional cost:

Cupping (use when replacing cupped propellers or for highly loaded applications): +10%

Extra thickness (ideal for inland waterways, light ice etc): +10% [gives an approximate 10% increase in propeller weight]

Skew increased up to 30 deg on Goldline Propellers (for smooth running): +20%

Skew increased up to 45 deg on GL or PL (for smooth running, electric drive propellers etc): +25%

Class '1' (for smoother running): + 15%

Class 'S' (for smoother running on high speed vessels): + 30%

Pitch/diameter ratio 1.5:1 or higher: +10%

Large bore (larger than max shown in price list): Price on application

Special bore machining, reverse bore etc: Price on application

GL343 with extra skew shown above

Custom additions

We can custom manufacture in accordance with your requirements including:

Custom thickness

Large Hub

Special hub machining

Custom blade shape or area

Nozzle Propellers

Thruster Propellers

Smaller / Larger diameters

Thicker blades

Large hub

Special hub machining

Custom blade shape or area

Nozzle propellers

Thruster propellers

Most custom requirements

Adjustment of stock propellers:

If you would like a stock propeller adjusted to your required diameter, pitch or bore we charge the following:

Boring of propeller (to suit your taper requirements): £45 / \$60.

Adjustment of diameter and / or pitch: £10 / \$15 per blade.

We have the largest stock of water lubricated bearings in Europe available for immediate dispatch. Common stock sizes shown above but we regularly have more sizes available. Any size available upon request (including custom diameters, custom lengths, spiral flutes, flanged etc). Stainless steel and aluminium shell bearings are also available manufactured to order.

Prices include nuts, keys and tab washers. Propeller nuts can be upgraded to a cone type nut for a small additional charge. All shafts are precision straightened using our custom shaft press. We have a large stock of shaft material on the shelf to ensure a fast turnaround.

The above shows only a small selection of our capabilities. We regularly manufacture shafts in diameters from 0.75" to 8" (200mm)+. Please contact us for alternative diameters and lengths.

We offer complete sterngear assemblies (everything from the gearbox backwards) so if you require additional components please contact us.

Additional costs for boring R&D couplings will be charged where applicable.

Additional Products:

We offer all components from the gearbox backwards including all shaftline components.

We have a fully equipped workshop that regularly manufactures shafts in diameters from 0.75" to 8" (200mm)+.

Components can be MMP standard or custom made to customer requirements at competitive prices. Our in-house design team will advise on the correct solution. Contact
